10-year guarantee*

on HAFI Premium Design and HAFI Public Line

We consider production of our products within the scope of the relevant DIN (EN) standards to be a basic requirement of our quality management. Continuous improvements to our production processes and the associated quality objectives as well as customer-focused thinking and action are however also the focus of our corporate philosophy.

HAFI guarantees decades of maintenance-free use with successful external testing of more than one million movement cycles, spring loaded and internal stop – in compliance with the standards criteria. Equaling 5 times the standards requirements.

Continuous internal production control with state of the art test equipment in our laboratory for monitoring quality standards

- Computer-controlled salt spray and climate chamber
- X-ray analysis (XRF)
- Equipment for testing resistance to repeated opening and closing
- Test rigs for load tests
- Qualified QM personnel
- DIN EN ISO 9001

HAFI Premium Design and HAFI Public Line hardware tested for over 1.000.000 movement cycles

- Fulfils all test requirements in accordance with DIN EN 1906 Grade 4/7* before and after continuous function of 1,000,000 movement cycles
- 10-year functional guarantee
- EN 1670 Grade 5

Continuous external monitoring of the certified products to DIN (EN) standard for all trades in the building by accredited testing institutes

- PIV Velbert
- MPA NRW
- TÜV Nord
- HFA Holzforschung Austria

Welcome to HAFI

We are an SME which was established on 01.01.1978 by Hans Fink. HAFI designs and manufactures a large number of products for commercial and residential buildings. HAFI manufactures all sorts of metal fittings with a timeless design from stainless steel and aluminium. The door handle is a building's business card. The shape and surface finish are decided individually by architects and designers as they envisage them. We are happy to accommodate customer requests when designs are being selected and we have a wide range of timeless classic designs available. In doing so we call to mind our design background in Ulm with the Hochschule für Gestaltung (HfG) in Ulm, and its first vice chancellor Max Bill. It was an institution with an international reputation, which still makes its influence felt even today. Things have been developed in the Product Design, Visual Communication, Information, Film and Industrial Construction departments, which were not conceived to be once-off products, but which were intended for mass reproduction.

HAFI guides its customers in the conception and design stages and supports them right through to prototype construction and afterwards right up to the hand-over of the complete assembly. This is how HAFI turns its customers' designs into reality, creating genuine products with a durable design. We are passionate about supplying top-quality individual products. The places in which door fittings are installed and conditions to which they are exposed vary just as much as the range of products available within the industry. Frequently it is ascertained in retrospect that the door furniture does not satisfy the specifications for its place of use. HAFI took these circumstances as a reason for being able to offer the right solution for every door by having a wide range of technical options.

History

- 1978 Foundation of HAFI by Hans Fink; Business focus: manufacture of cast aluminium parts
- 1991 Continuous further development of product range moving towards the area of doors and gates
- 1995 Expansion of product range in the private residential sector
- 1998 HAFI places production focus on the material stainless steel
- 2000 HAFI successfully established in the production of fittings for the commercial and public construction industry
- 2002 Foundation of the subsidiary HAFI Ltd. Hong Kong
- 2004 Expansion of product range in the facade sector and metal construction
- 2006 Sales markets: Germany, Europe, Middle East, Asia; Export quota: 25%
- 2007 Expansion of floor space to 10,000 m² at the Elchingen facility
- 2008 Expansion of development competence in electronic fittings
- 2010 ISO 9001 Certification
- 2011 New development and testing center at the Elchingen facility
- 2012 HAFI and SAG cooperate in electronic access control
- 2013 HAFI CARE+SEPT® – the active antibacterial surface with a purely physical mechanism
- 2014 Foundation of the HAFI Benelux GmbH
- 2015 HAFI becomes a member of the German Design Council
- 2016 Recertification to ISO 9001:2015
Expansion of the office space by 40% at the Elchingen facility
Development of the world's first door handles under the brand "Design by Studio F. A. Porsche"
- 2017 Product offensive with the largest product range expansion in the 39 years of history of HAFI
- 2018 Implementation of a new ERP software for all divisions and manufacturing facilities
Redesign of the HAFI Homepage

Company Philosophy

Fair Conduct

We conduct ourselves with tolerance, respect and appreciation. As a service provider, we pay mutual attention to our personal and cultural diversity. We trust one another and always put ourselves in the other person's position in order to understand him or her. We assess decisions in good faith with the company's success in mind and bring about changes quickly and with sound judgement. We extend our loyalty to companies, colleagues and customers.

Open Communication

In order to achieve maximum transparency, we inform our employees promptly, reliably and officially and, furthermore, we endeavour to communicate both internally and externally by establishing a direct dialogue.

Customer Focus

We constantly offer new incentives to our customers which are a great success and can be instrumental in their placing further orders with us. We supply our customers with what he/she needs and show the measurable added value, for example, with savings on investments and/or follow-up costs, prevention of additional costs, the shortening of deadlines, etc. Further incentives include architecture, quality and the good overall impression made by the objects of reference. We negotiate our services simply and clearly. We take over responsibility for the project, provide our customers with the essential safety and security. We guarantee success through our professional service. If the customer is unhappy with any of our services we react immediately and quickly search for effective solutions. Mistakes or oversights by those involved in the project are rectified as quickly as possible.

Design by Studio F. A. Porsche
Design 311/Design 212

As the result of the cooperation between HAFI and Studio F. A. Porsche originated two timeless and elegant design collections for exclusive real estate projects.

HAFI Flush Line
Door handles

Flat design-rosettes round or square with a height of rosette of just 4 mm or flush-mounted in the door leaf. Thanks to the design option to style the design-rosettes in the same colour as the door element, the cover melts into the surface to form a single design unit.

HAFI Flush Line
Window handles/Lifting sliding door handles

The flush-fitting ensures that the relevant handle design is brought to the fore. The patented "Push-Push"-function enables a toolfree mounting and dismounting of the cover thanks to the simple meshing with the sub-construction.

HAFI Light Line
Design by Jean-Michel Wilmotte

The mechatronic door handle enables the visualisation of the closing status of the door by means of LED technology. The power supply can be carried out by a battery module or alternatively by an external power supply.

HAFI Public Line – Plain doors
Design-rosettes in square style

1,000,000 movement cycles with certificate*
free movement < 1.0 mm
free angular movement < 1.0 mm

Classification key according to DIN EN 1906
4|7*|-|B|1|5|0|B

HAFI Public Line – Frame doors
Design-rosettes in angular style

1,000,000 movement cycles with certificate*
free movement < 1.0 mm
free angular movement < 1.0 mm

Classification key according to DIN EN 1906
4|7*|-|B|1|5|0|B

HAFI Public Line – Window handles
Design-rosettes in angular style

Window handles according to DIN EN 13126-3
with 90° or 45° positioning

- Lockable (with separate sub-construction)
burglary resistance according to DIN EN 1627 RC 1–6
- Tilt-before-turn (with separate sub-construction)

HAFI CARE+SEPT®
The active antibacterial surface

The unique biocide-free, active antibacterial surface with a purely physical mechanism. HAFI CARE+SEPT® is available for a variety of our products.

Cross-trade – without compromises!

To date, no competitor has created an aesthetic and technical response to the architectural needs of a unified, cross-trade tender specification.

It was time to confront this legitimate demand of the market – why should builders or architects have to compromise within individual trades with respect to the technical properties of the door levers?!

While many market companions have concentrated on the sales and self-imbossment of increasing and exceeding advanced tested movement cycles in the interior wooden door segment, HAFI has consistently and consequently realized an overdue need of the market.

HAFI has managed to uncompromisingly implement the extended duration function of 1 million movement cycles, in compliance with all technical and normative criteria according to DIN EN 1906, in conjunction with an integrated spring preload (function B) uniformly for the trades wooden doors, metal doors, profile frame doors and burglar-proof doors with RC requirements (according to DIN EN 1627).

The first reference project in which this claim was implemented in all consequence is the European Central Bank in Frankfurt.

The following product characteristics are consistent across all trades implemented in our new assembly technique:

Spring preload for a horizontal 0° positioning with 1 million movement cycles, certified according to DIN EN 1906 (PIV Cert Plus).

- The spring forces were significantly increased, so that sagging door levers are a thing of the past.
- 0° horizontal stop; this technical detail keeps the door lever exactly horizontal.
- Corrosion resistance class 5 according to DIN EN 1670
- Pivot-mounted, maintenance-free equalizing bushing
- On request, form-fitting male and female connection
- Free play < 1.0 mm
- Free play at rest < 1.0 mm
- Environmental Product Declaration (EPD) according to DIN EN 15804 and DIN EN ISO 14025 (Type III)
- Quality management according to DIN EN ISO 9001

Handle sets on rosettes – Plain doors

HAFI Public Line – Plain doors

Maintenance-free door handle fitting with integrated ball bearing and low friction, self-lubricating equalizing bushing, spring loaded, zinc plated steel sub-construction, with rosettes and escutcheons, invisible fixation

1,000,000 movement cycles with certificate*
 free movement < 1.0 mm
 free angular movement < 1.0 mm

Classification key according to DIN EN 1906
4|7*|-|B|1|5|0|B

Security fittings – Frame doors

HAFI security fittings – Frame doors

Maintenance-free security fitting of solid stainless steel, with low friction, self-lubricating equalizing bushing, spring loaded, invisible fixation

Protection class SK4 (ES3)

1,000,000 movement cycles with certificate*
 free movement < 1.0 mm
 free angular movement < 1.0 mm

Classification key according to DIN EN 1906
4|7*|-|B|1|5|4|B

SK4 (ES3)

Security fittings – Plain doors

HAFI security fittings – Plain doors

Maintenance-free security fitting of solid stainless steel, with low friction, self-lubricating equalizing bushing, spring loaded, invisible fixation

Protection class SK4 (ES3)

1,000,000 movement cycles with certificate*
 free movement < 1.0 mm
 free angular movement < 1.0 mm

Classification key according to DIN EN 1906
4|7*|-|B|1|5|4|B

SK4 (ES3)

From the initial idea through to the end product

HAFI accompanies you from the initial idea through to the end product. We produce a large number of hardware products with timeless design. After all, the door handle is the visiting card of every house.

The shape and surface finish can be individually adjusted by architects and designers, according to their own ideas.

The wide variety of surfaces ranges from matt and polished stainless steel or aluminium through to titanium surfaces with a coloured finish. We are always pleased to respond to our customers' wishes. Our team accompanies and assists you, from the initial concept through to the design and building of prototypes. HAFI allows your designs to become reality and authentic products with lasting design are created. Top quality individualism is our passion. This does not mean that modern design excludes engineering, as shown by the fact that our project hardware is certified to DIN 18273, EN 1634, DIN EN 1906, DIN EN 1670, DIN EN 179, DIN EN 1125, ÖNORM B 3859 and DIN 18255.

During the conceptual phase we ensure that your design fulfils all relevant standards. On request, you receive an accurate copy of your design as a hand-made sample on the basis of a preliminarily estimated quotation.

We provide constructive advice if special construction solutions are required. Based on the draft design, it is then possible to decide the extent to which it is to be adapted to roses, short, long or square doorplates or window handles.

If you require a large quantity of your design produced by HAFI, we will provide you with a competitive offer.

DIN EN 1906

EN 1906, which defines the requirements and methods of testing for lever and knob handle door furniture, was drawn up within the scope of the European harmonisation of standards for hardware. It was ratified at European level in October 2001 and was adopted as a German standard, DIN EN 1906, issue May 2002. ÖNORM EN 1906 was ratified in Austria in July 2002.

DIN EN 1906 only describes performance parameters; it does not define any dimensions for hardware components or hardware.

The background of these requirements is to simulate actual everyday use. This is achieved by defining load requirements and taking subsequent clearance measurements before and after continuous function tests on the hardware.

The various performance parameters are described in DIN EN 1906. These are based on frequency of use and the expected area of use. The load requirements and test forces are graded accordingly. A classification code was introduced to enable different products to be compared.

Door hardware tested to DIN EN 1906 is described by an 8-digit classification code.

In the fourth digit of the classification code, the identifier 0, A, B or C is used to document the suitability of the product with respect to fire resistance in smoke control and fire doors.

HAFI hardware systems are tested and certified to DIN 18273, EN 1634 Part 1, ÖNORM B 3859 and other international fire safety regulations.

Note:

Unlike our test certificates, an inspection report cannot verify these properties, as it merely substantiates the product property of a single test piece at the time of the one-off and nonrecurring product test, i.e. the test report does not represent continuous, externally monitored quality assurance.

Classification code (e.g. 47*-B1150B), as per 2012

Classification code	Digit	Possible class	Class	Meaning of the class
Category of use	1st	1 to 4	1	Medium frequency of use by persons with high incentive to exercise care, small chance of misuse (e.g. internal residential doors)
			2	Medium frequency of use by persons with high incentive to exercise care, some chance of misuse (e.g. internal office doors)
			3	High frequency of use by the public or others with little incentive to exercise care and high chance of misuse (e.g. public office doors)
			4	High frequency of use on doors subject to frequent violent use or damage (e.g. doors in sports stadiums, barracks or public buildings)
Durability	2nd	6 to 7*	6	100,000 test cycles
			7	200,000 test cycles
			7*	1,000,000 test cycles
Test door mass	3rd	irrelevant	–	No classification defined
Fire resistance	4th	0, A, B, C or D	0	No performance defined
			A	Suitable for use on smoke door assemblies
			A1	as A, tested with 200,000 test cycles on a test door
			B	Suitable for use on smoke/fire door assemblies
			B1	as B, tested with 200,000 test cycles on a test door
			C	Suitable for use on smoke/fire door assemblies with requirements on fire protection inserts in the plate, door rosette and escutcheon
			C1	as C, tested with 200,000 test cycles on a test door
			D	Suitable for use on smoke/fire door assemblies with requirements on a special handle core in the door handle/doorknob
D1	as D, tested with 200,000 test cycles on a test door			
Safety	5th	0 or 1	0	For normal use
			1	Safety requirements
Corrosion resistance	6th	0 to 5	0	No classification defined
			1	Low corrosion resistance (24 h salt spray test)
			2	Moderate corrosion resistance (48 h salt spray test)
			3	High corrosion resistance (96 h salt spray test)
			4	Extremely high corrosion resistance (240 h salt spray test)
5	Extraordinarily high corrosion resistance (480 h salt spray test)			
Security (burglary resistance)	7th	0 to 4	0	Not burglary resistant
			1	Low burglary resistance
			2	Moderate burglary resistance
			3	High burglary resistance
Type of operation	8th	A, B or U	4	Extra high burglary resistance
			A	Spring assisted furniture
			B	Spring loaded furniture
			U	Unsprung furniture

DIN 18273

Fire protection hardware according to DIN 18273

Fire doorsets to DIN 18273 are included in Construction Product List A of the building codes of the German federal states and require a monitoring certificate (ÜZ) as proof of fitness for use. HAFI fire protection hardware is quality monitored according to these guidelines and have been issued with a monitoring certificate (ÜZ) by the material testing institute MPA NRW.

Door lever handle sets for fire doors and smoke control doors must form a sub-assembly, whose individual parts must be coordinated with each other by the hardware manufacturer. The hardware manufacturer must name and describe these individual parts as belonging together (e.g. in parts lists). It is not permitted to assemble a door lever fitting from unnamed individual parts – even from the same manufacturer, if verification of suitability of the individual parts has not been provided according to this standard.

Fire doorsets must be designed so that if they are installed according to the regulations and used as intended, the fire response and durable function of the door are not impaired.

To this end, all functionally relevant hardware components must be selected from a material, whose melting point is above 1,000 °C. The reason for this is that it must still be possible to use a fire door after a fire.

All hardware components of a fire door must be approved by the construction authority. It may not be changed or modified at any time.

To ensure the durability of fire hardware, they must survive a continuous function test of 200.000 closing actions (inactive leaf doorsets 100,000) in conformity with the standards.

Fire protection hardware according to Austrian standard ÖNORM B 3859

HAFI hardware systems are tested and certified to DIN 18273, ÖNORM B 3859 and other international fire safety regulations.

DIN EN 179

Emergency exit door devices according to DIN EN 179

DIN EN 179 specifies the use and requirements for emergency exit devices with lever handles and push pads.

Für Standards do not automatically have to be used solely because they are valid. They are merely recommendations, which can be used as the basis of contracts or invitations to tender. Use of a standard is not mandatory in Germany until precisely this standard is specified in the building codes of the federal states (LBO). The LBOs of all federal states refer to the construction products lists so that each federal state does not have to test each new standard separately.

Hardware combinations as defined in EN 179 are to be assessed as construction authority relevant products which are named in the construction product list with the necessary EU or CE conformity marking. They consist of a lock, locking plate and door furniture and must always be tested and certified together.

HAFI offers you a wide, comprehensive and multi-trade range of products with the appropriate tests and certifications for the hardware packages approved in combination to the EN 179 standard.

The handle models illustrated on the following page are available as door handle sets and handle-knob sets according to the above standards in the types:

- Handle set on rosettes
- Handle set on short plates
- Handle set on long plates
- Handle set on square plates
- Handle set for frame doors
- Handle set for security fittings

DIN EN 1125

For emergency exits at which panic situations are likely to occur, panic hardware combinations (lock, lockplate and grab bars) must be used according to the standard.

This applies wherever use by the public with lack of knowledge of the local spatial circumstances is likely.

In case of a panic, people move towards the emergency exits and these masses of people press against the doors. In this situation, the emergency exits with the appropriate panic hardware must open immediately outwards by pressing on the panic bar.

Panic hardware combinations, must be appropriately tested and certified as a functional unit in accordance with the EN 1125 standard.

Unfortunately, the notes on use of the construction, like EN 179 and EN 1125, hardly deal with the question regarding from when a door is deemed to be a panic door and therefore, from when EN 1125 must be applied. It is our firm conviction that the final decision regarding where panic bar hardware is to be used should lie with the architect/designer – in consultation with the responsible construction authority, of course.

While not exhaustive, we would like to name a few relevant DIN standards in connection with our products for windows and doors.

DIN EN 1906
Building hardware – Lever handles and knob furniture – Requirements and test methods; German version EN 1906:2010

DIN EN 1670
Building hardware – Corrosion resistance – Requirements and test methods; German version EN 1670:2007

DIN EN 1627
Windows, doors, shutters – Burglar resistance – Requirements and classification; German version EN 1627:2011

DIN EN 1628
Windows, doors, shutters – Burglar resistance – Test method for the determination of resistance under static loading; German version EN 1628:2011

DIN EN 1629
Windows, doors, shutters – Burglar resistance – Test method for the determination of resistance under dynamic loading; German version EN 1629:2011

DIN EN 1630
Windows, doors, shutters – Burglar resistance – Test method for the determination of resistance to manual burglary attempts; German version EN 1630:2011

DIN 18257
Building hardware – Security plates – Definitions, measurements, requirements, marking

DIN 18273
Building hardware – Lever handle units for fire doors and smoke control doors – Definitions, measurements, requirements and testing

DIN 18250
Locks – Mortise locks for fire doors and smoke control doors

DIN 58125
Construction of schools – Constructional requirements for accident prevention

DIN EN 1303
Building hardware – Cylinders for locks – Requirements and test methods; German version EN 1303:2005

DIN 18101
Doors; Doors for residential buildings; Sizes of door leaves, position of hinges and lock; interdependence of dimensions

DIN 18255
Building hardware – Door lever handles, backplates and escutcheons – Definitions, measurements, requirements, marking

DIN 4102-5
Fire behaviour of building materials and building components; Fire barriers, barriers in lift wells and glazings resistant against fire; Definitions, requirements and testing

DIN 4102-8
Fire behaviour of building materials and building components – Part 8: Small scale test furnace

DIN 18095-1
Doors; Smoke control doors; Definitions and requirements

DIN 18095-2
Doors; Smoke control doors; Type testing for durability and leakage

DIN EN 179
Building hardware – Emergency exit devices operated by a lever handle or push pad for use on escape routes – Requirements and test methods; German version EN 179:2008

DIN EN 1125
Building hardware – Panic exit devices operated by a horizontal bar for use on escape routes – Requirements and test methods; German version EN 1125:2008

DIN EN 1634-1
Fire resistance and smoke control tests for doors, gates, shutters, windows and building hardware – Part 1: Fire resistance tests for doors, gates, shutters and windows; German version EN 1634-1:2014

DIN EN 13126-3
Building hardware – Hardware for windows and door height windows – Requirements and test methods – Part 3: Handles, primarily for Tilt and Turn, Tilt-First and Turn-Only hardware; German version EN 13126-3:2011

DIN 107

A differentiation is made between (DIN) left and (DIN) right doors, depending on the rotational direction of a door. The door direction or side designation according to DIN 107 is determined as follows:

- Visible seat of the door hinges on the left = DIN left
- Visible seat of the door hinges on the right = DIN right

Opening to the outside

DIN left

DIN right

Opening to the inside

DIN left

DIN right

HAFI environmental information

As a member of the DGNB (Deutsche Gesellschaft für nachhaltiges Bauen = German Society for sustainable building) as well as the IBU (Institut Bauen und Umwelt e.V. = Institute Construction and Environment e.V.) we identify ourselves with the guiding principles of sustainable building. Our environmental product declarations (EPDs) ensure optimal transparency.

HAFI products are certified by the IBU according to ISO 14025 and EN 15804.

Satin stainless steel

Polished stainless steel

Stainless steel

Since the invention of rust-proof steels in 1912, manufacturers and processors have used different trade names, such as V2A/V4A, Nirosta, Remanit and Cromargan. They quickly developed diverse applications: from the construction of vessels in the chemical industry to constructions in automobile and aircraft industry, from construction materials through to household appliances. "Stainless steel" is a collective term for rust-proof steels. They contain at least 10.5% chromium (Cr) and have far better corrosion resistance compared to unalloyed steels.

Starting in the consumer goods sector, the term "stainless steel" has established itself. During its long history, use of stainless steel has become increasingly important in an evergrowing number of areas due to its inherent corrosion resistance and good mechanical properties. "Stainless steel" material is, for example, ideal for door and window hardware, because its surface is extremely resistant to corrosion, even in the toughest use it hardly shows any signs of impact or scratches and above all is very easy to maintain due to the additional chromium and nickel alloys.

The corrosion resistance is due to an invisible passive layer, which forms due to the access of atmospheric oxygen and automatically forms on the product again even if mechanically damaged. The surface of "stainless steel" is smooth and non-porous. It is therefore, more difficult for pockets to form in which dirt and microorganisms can accumulate.

The standard type "matt brushed stainless steel" is particularly insensitive. Traces of dirt can be removed with a damp cloth. "Polished stainless steel" is an environmentally friendly alternative to chrome-plated surfaces. The polished and PVD special colours types are produced to order.

PVD satin black

PVD satin bronze

PVD satin dark bronze

PVD polished brass

PVD Finishes

In the PVD process (Physical Vapour Deposition), a hard material coating is formed directly in a vacuum chamber through condensation of material vapour on the starting material. The material, which is called the target, is partially evaporated by bombarding it with laser rays, magnetically deflected ions or electrons and arc discharge. This metal vapour that is produced reacts with gas added to the chamber on the surface of the workpiece to form the required hard material coating. A new type of molecular lattice structure is formed, which is characterised by extreme durability.

Thanks to PVD, you receive high-grade finished products which withstand even the most adverse conditions in everyday use: above-average abrasion resistance, high scratch resistance, extreme corrosion resistance, resistance to colour changes. Other than the shown finishes individual metallic colourings are available on request.

Important notes:

PVD is a hardened material coating, which positively influences the surface properties as well as the optic of the base material (e.g. hardness, wear resistance).

For cleaning and care, do not use aggressive, acid or alkaline based cleaning or polishing agents (e.g. vinegar, citric acid, scouring etc.).

Gold jewelry on the hands (e.g. rings) can with time form deposits that look like scratches on the PVD coating. However, these can be removed by cleaning the surface.

CARE+SEPT® – The active antibacterial surface	30
PROTECT – Amok prevention	32
BRAILLE – Door handles with Braille information	36

The unique biocide-free, active antibacterial surface with a purely physical mechanism

The newly developed active HAFI CARE+SEPT® surface is available for a number of our products.

- ▶ **99.999% germicidal effect**
in less than 4 minutes after contamination
- ▶ **Eliminates virtually all bacteria and fungi**
through a natural, physical active ingredient
- ▶ **Consistent, long-term efficacy**
without any re-treatment of the surfaces
- ▶ **Anti-wear, durable surface**
small scale damage to the surface does not impair the effect
- ▶ **Resistant to cleaning agents and disinfectants**
as recommended by the Robert Koch Institute
- ▶ **Completely harmless to the human organism**
the active agent in CARE+SEPT® has the approval of the U.S. Food and Drug Administration
- ▶ **Does not contain any harmful heavy metals or nanoparticles**
which may be released (copper-free, silver-free, biocide-free, no manipulation of the DNA)
- ▶ **Meets the standards**
DIN EN ISO 20743, DIN EN ISO 22196:2011-08 and JIS Z 2801:2000 (ISO 22196)

Advantages over other surface techniques

- ▶ **Start of the reaction immediately after contamination**
99.999% germicidal effect within 4 minutes
- ▶ **No development of resistance is possible (e.g. transmembrane efflux)**
as is the case with surfaces containing copper or silver
- ▶ **No reduction in the lasting effect**
because, unlike copper or silver surfaces, there is no formation of an oxide layer which reduces the ion exchange
- ▶ **No light effect is necessary required for the surface to work**
unlike the case with photocatalytic processes
- ▶ **No follow up treatment of the surfaces is necessary**
as is the case with methods involving disinfectant coatings

Recommended applications for HAFI CARE+SEPT®

- Hospitals
- Health clinics
- Facilities for outpatient surgery
- Maternity units
- Dialysis facilities
- Facilities for preventive care and rehabilitation
- Medical and dental offices
- Practices of other human medical health professionals
- Homes for the elderly and nursing homes
- Laboratories
- Food preparation and catering establishments
- Hotels and restaurants
- Leisure and service facilities
- Schools and nursery schools
- Public buildings frequented by the public

Multi-drug resistant pathogens

are bacteria, which develop 'resistances' to antibiotics and produce harmful toxins themselves, e.g. extended spectrum beta-lactamase producing strains of klebsiella e. coli and other gram-negative bacteria (ESBL), methicillin-resistant staphylococcus aureus (MRSA), vancomycin-resistant enterococci (VRE), acinetobacter baumannii, Clostridium difficile.
Source: Deutsches Ärzteblatt 107, issue 33, A 1570 to 1573, sorted by frequency

MRSA = methicillin (multi)-resistant staphylococcus aureus
MRE = multi-resistant pathogens
ORSA = oxacillin-resistant staphylococcus aureus
VISA = vancomycin-intermediate staphylococcus aureus
VRSA = vancomycin-resistant staphylococcus aureus

MRSA (also known as ORSA) refers to strains of staphylococcus aureus which are resistant to all beta-lactam antibiotics that have been available on the market (e.g. penicillin). However, as a general rule, they are multi-resistant, i.e. they have resistances over and above other classes of antibiotics.

Resistance mechanisms

as a result of the modification of the antibiotic, the modification of the target structure as well as the transmembrane efflux.

The transmembrane efflux is of particular note. It plays a role in the formation of resistance on copper and silver surfaces. Here, the pathogens develop their own 'pumps' which pump the copper and silver ions that are harmful for them outwards again, through the cell wall.

Source: N. Engl. J. Med. 2010; 362:1804-13

Risk factors for infections (RKI 2002)

Patient factors:

- Old age
- Underlying diseases
- Restricted immune defence
- Malnutrition
- Genetic factors
- Defects on the body surface

Human factors:

- hygiene rules are not adequately observed due to a lack of time

Environmental factors:

- Hospital environment (proximity to other patients)
- Contamination of equipment

Treatment factors:

- Advances in medical technology
- Treatment affecting the immune system
- Invasive treatment methods

Microbiological factors:

- Virulence of the pathogens
- Ability to survive in the hospital environment
- Resistance properties

Figures related to illnesses spread by 'hospital germs'

Estimated annual numbers for Germany:
– 400,000 to 600,000 illnesses
– 80,000 to 180,000 preventable illnesses
– 1,500 to 4,500 deaths

Multi-resistant pathogens, such as staphylococcus aureus (MRSA) are the cause of nosocomial infections. Typical diseases that are caused include urinary tract infections, inflammation of the lungs, sepsis and wound infections.

Source: Deutsches Ärzteblatt 107, issue 33, A 1570 to 1573

Statutory hygiene plans of the Robert Koch Institute

Hygiene plans are internally defined procedures regulating how legal requirements and hygiene recommendations are to be implemented on site.

Since 2001, they are binding for all healthcare facilities in Germany.

With the Infection Protection Act (IfSG) taking effect on 01.01.2001, communal institutions are obliged to draw up a hygiene plan and update it regularly (Sect. 36 IfSG).

In accordance with the Infection Protection Act all health care facilities in Germany, must ensure that all necessary measures are taken in accordance with the latest advances in medical science in order to prevent nosocomial infections and the spread of pathogens, particularly those with resistances. This especially applies to:

- Hospitals
- Facilities for outpatient surgery
- Facilities for preventive care and rehabilitation
- Dialysis facilities
- Health clinics
- Maternity units
- Treatment or care facilities, comparable with one of the aforementioned facilities
- Medical and dental offices
- Practices of other human medical health professionals
- Homes for the elderly and nursing homes
- Schools and nursery schools

Antibacterial surfaces

are an important component for avoiding infections through multi-resistant pathogens (e.g. MRSA) within the framework of the current disinfection and hygiene plans of the Robert Koch Institute.

However, HAFI CARE+SEPT® is not a substitute for the legal requirement to draw up, implement and comply with disinfection and hygiene plans in accordance with Sect. 36 IfSG.

HAFI amok prevention

Prevention

Even before the events at Winnenden, Germany, the dangers and prevention of running amok in schools and public buildings has been a highly sensitive subject.

However, the event at Winnenden indicated the dramatic levels which an unforeseeable, life-threatening violent attack and the panic situation arising therefrom can reach, and has thus made a deep impression nationwide on the awareness of parents, teachers and pupils, as well as with responsible planners and architects.

There exists no overall-integrated defense and protection system to counter these situations of extreme danger. Damage can be only limited or even averted, if several preventive measures intermesh reliably.

The controlled functioning of a door is a significant step in providing protection against running amok and other dangerous situations and, in the special case of schools, these are predominantly classroom doors.

Functional solution for the door

The classroom or a room protected by amok prevention can be a life-saving haven for endangered persons in an emergency.

On the other hand, the same room in the case of fire, explosion or also amok situations, can become a life-threatening trap for the persons in this room, without an effective amok prevention.

HAFI has started a joint cooperation with the company SAG Schulte-Schlagbaum as early as the year 2008, to develop a hardware unit which guarantees the following protective functions in schools e.g. in the case of running amok.

	Classroom (inside)	Corridor (outside)
Doors can be passed through from inside and outside.	Open 	Open 
The outside lever is blocked from inside by locking using a knob cylinder.	Open 	Secured 
Using the inside push-mechanism, exiting the room is possible at all times.	Open 	Secured 

- Any endangered person can immediately lock the door manually from inside.
- The specially developed classroom lock blocks the outside lever and is additionally secured using the blocking-latch-function.
- The door can be operated at all times from inside to outside (e.g. in case of evacuation).
- Even if individual persons leave the classroom, the lock mechanism remains active.
- Persons with key authorization can open the door from outside at all times.

Product advantages

- There is no wear-sensitive bolt which, for example, could be damaged by vandalism; the system is designed for sustainable, permanent functionality.
- In case of activation of the system, the outside lever is blocked; in this way, the function status is immediately identifiable at all times (important for rescue and evacuation measures).
- The specially developed PROTECT security lock may be used with either a purely mechanical cylinder or with an electronic cylinder, which doesn't need to be wired.
- HAFI PROTECT can be retrofitted into existing door units at any time.
- The door lever set, certified to DIN EN 179 and DIN EN 1906, fulfills maximum standard requirements.
- The door levers are also generally available in solid stainless steel casting (vandal-proof).
- HAFI Braille door lever sets with information for blind persons on the door lever surface are available in combination with amok prevention.
- Advanced continuous function of locks and fittings successfully tested and certified to 500,000 movement cycles.

Consultation competence

The first step in hazard prevention is the most important!
 We are able to provide you with objective, competent advisory support, taking into consideration local factors and country specific building regulations, and/or the legal DIN standard requirements, e.g. for escape and rescue routes.

Nationwide numerous schools, administration buildings, sports facilities and industrial buildings have already been equipped with HAFI PROTECT.

In case of any questions about the HAFI amok prevention and regarding schedule coordination, please refer to us directly by e-mail at

info@hafi.de

Samples block on request

Door handles with Braille information

Braille is used by visually impaired and blind persons. The writing was developed in 1825 by the French Louis Braille and consists of patterns of dots.

The marking is positioned on the inner side of the handle, so that the fingertips can identify the bumps immediately when operating the handle.

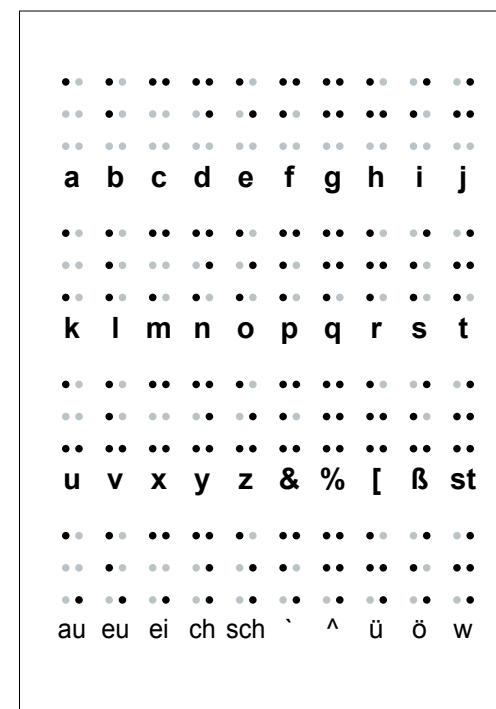

Braille can be translated in different languages due to its international validity.

Standards

The system of the German Braille – published by the Braille commission of the German-speaking countries – publisher of the Deutsche Blindenstudienanstalt Marburg (Lahn)

Relevant standards:

- DIN 32976:2007-08 Braille – Requirements and dimensions
- DIN 18040-1:2010-10 Construction of accessible buildings – Design principles – Part 1: Publicly accessible buildings
- DIN 18040-2:2010-10 Construction of accessible buildings – Design principles – Part 2: Dwellings
- DIN 32986:2015-01 Tactile lettering and labeling – Requirements on the presentation and application of Braille and raised lettering

Braille

Six dots, three in the height and two dots in the width, form the basis of the pattern for the combination of dots by which letters, numbers, symbols and signs can be featured.

**HAFI Premium Design
Design 311**

“The design concept of the door handle 311 combines elegance with modernity, which in harmonious fusion are creating a haptic experience. The design is based on a discreet, geometric shape which pursues the natural position of the thumb thanks to a flowing curve. As enhancing element, the door handle has a highly polished surrounding chamfer. This detail formulates the quality and precision that define the unique selling properties of the design.”

Christian Schwamkrug
Design Director Studio F. A. Porsche

COOP HIMMELB(L)AU was founded in Vienna in 1968 and has since been operating under the direction of Wolf D. Prix, CEO and design principal in the fields of art, architecture, urban planning and design. Another branch of the firm was opened in the United States in 1988 in Los Angeles.

The company's most well-known international projects include the Falkestrasse attic conversion in Vienna, the multifunctional UFA Cinema Center in Dresden, the BMW Welt in Munich, the Dalian International Conference Center in China, as well as the European Central Bank (EZB) in Frankfurt am Main.

COOP HIMMELB(L)AU currently employs over 150 people from 19 different countries.

The COOP HIMMELB(L)AU door handle series reflects the company's approach to contemporary architecture. The elegant lines combine functionality and aesthetics into one dynamic, ergonomic shape. The door handle is very versatile and also meets the criteria for emergency exit doors according to the DIN EN 179 standard.

Design by
Jean-Michel Wilmotte

HAFI Premium Design
Design 248

Jean-Michel Wilmotte – an internationally renowned French architect and designer, with offices in France and London, is active with 165 employees from 33 countries.

Jean-Michel Wilmotte gained international recognition through his projects in Europe, Asia, Russia and the United States. His work spans from the architectural design of buildings through interior architecture to urban planning. Jean-Michel Wilmotte underlines his work with a sophistication and attention of the smallest detail and the constant search for quality.

HAFI Light Line
Design meets light technology

The mechatronic door handle enables the visualisation of the closing status of the door by means of LED technology. A cabling of the door element is basically not necessary. The power supply can be carried out by a battery module or alternatively by an external power supply.

Design by
Jean-Michel Wilmotte

HAFI Premium Design
Design 243

The HAFI Design 243, created by Jean-Michel Wilmotte, enables individual design options in cooperation with the architect.

The use of two colours and of satin and polished surfaces in conjunction with the warm, pleasant haptics enhances the modern design of the door handle.

The visible surfaces of the door handle permit a variety of labelling options.

Design by
AIA Life Designers

**HAFI Premium Design
Design 247**

AIA Life Designers is an interdisciplinary group of architects and engineers with 600 employees in France and on an international level. Numerous projects have been awarded prizes, including:

- the École Nationale Supérieure Maritime Le Havre – winner of the ArchiDesignClubAward 2016 and nominated at the Equerre d'Argent 2015
- the Pôle Sanitaire Ouest in Saint-Paul, La Réunion – prize-winner of the BIM d'OR 2016
- the offices of Crédit Mutuel – winner of the Grand Prix at the SIMI 2016 and of the ArchiDesignClubAward 2017

(www.a-i-a.fr)

The urban and societal engagement of AIA Life Designers is also reflected in the foundation AIA Architecture, Santé, Environnement (www.aiafondation.fr), which was established in 2011.

Designing a door handle means bestowing value on an action and a physical movement in an architectonic environment; it means setting up a physical relationship between the person and the building and thus thinking the architectonic design through to the end. It is certainly a matter here of a well thought out object as far as its use is concerned, but at the same time it is a well thought out object with regard to its tactile and tangible physical relationship.

The door handle design 247 that was developed in partnership with HAFI is unique with regard to its ergonomics and its comfort, and the sensuality of the lines leads to smoothness on contact with the hand. The ascending profile line gives the door handle the appearance of a bird's wing, elongated and smooth at the same time. Its angle of inclination prompts a natural movement of the hand and its design facilitates its smooth operation. Opening a door may perhaps mean awakening an emotion.

SSP design by Bastian Scholz

**HAFI Premium Design
Design 241**

“The offset with the crop”

The guiding principle of the formation of the concept was to design an everyday object that is not too obvious, but is haptically and optically attractive. To design a handle whose cranked variant does not represent a unique feature of the series, but is understood as part of the family.

For this reason, first of all a cranked version was developed as a concept and the offset was transferred consistently to the handle family as a striking feature of the series.

Square and circle were combined with one another for ergonomic access and coalesced into a reduced shape. The tube is halved towards the semicircle and is supplemented by a divided square tube. Interplay develops between external directness and the surprising haptically smooth curve when the handle is gripped.

The tapering of the shank to the mini crop enables the logical inclusion of tactile lettering at the point at which a hand first grasps the handle.

The design of the handle family is composed in a simple, elementary form and is at the same time multifaceted, depending on the perspective and angle.

HAFI Flush Line
Flush aesthetics

HAFI has taken up the design engineering trend for the reduction of visible structures and has developed a new product line for doors, windows and lifting sliding doors. The result is a combination of aesthetics, flushness and convincing mounting friendliness.

Thanks to the design options afforded by a flush-fitted design-rosette in the same colour as the door or window element, the cover melts into the surface to form a single design unit.

HAFI Flush Line
Door handles

Due to the reduced installation height of the rosette of just 4 mm with integrated spring function the Flush Line allows unrestricted use for object and fire protection doors.

After the mounting of the sub-construction either in or on the door leaf, the door handle with the cover rosette can be quickly secured by way of the simple "Push-Click"-function and the tightening of a grub screw.

**HAFI Flush Line
Window handles**

The HAFI window handle is pivot-mounted on a sub-construction with a ball latch and without a visible grub screw.

The "Push-Push"-function enables a tool-free mounting and dismantling of the cover thanks to the simple meshing of the rosette with the sub-construction.

The flush-fitting ensures that the relevant window handle design is brought to the fore.

**HAFI Flush Line
Lifting sliding door handles**

For the first time, the patented "Push-Push"-function enables the easy flush mounting of a lifting sliding door handle in aluminium or wooden sliding doors.

**HAFI Flush Line
Finishes**

Thanks to the various surface finishes in polished stainless steel, satin brushed or painted in RAL colours as desired of the window handles and lifting sliding door handles there is the opportunity to fuse the cover with the surface of the door or window element into one single unit.

- Satin stainless steel

HAFI Public Line – Design 440

Lockable sub-construction, oval form, fitting all models of the Public Line

Can be mounted with the cylinder towards the top or the bottom

Burglary resistant according to DIN EN 1627 RC 1–6

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 442

Lockable sub-construction with the special function "Tilt-before-turn", oval form, fitting all models of the Public Line

With the cylinder on top on request

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 441

Lockable sub-construction, angular form, fitting all models of the Public Line

Can be mounted with the cylinder towards the top or the bottom

Burglary resistant according to DIN EN 1627 RC 1–6

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 443

Lockable sub-construction with the special function "Tilt-before-turn", angular form, fitting all models of the Public Line

With the cylinder on top on request

- Satin stainless steel
- Polished stainless steel

**HAFI Flush Line
Flush aesthetics**

HAFI has taken up the design engineering trend for the reduction of visible structures and has developed a new product line for doors, windows and lifting sliding doors. The result is a combination of aesthetics, flushness and convincing mounting friendliness.

Thanks to the design options afforded by a flush-fitted design-rosette in the same colour as the door or window element, the cover melts into the surface to form a single design unit.

Door handles

Due to the reduced installation height of the rosette of just 4 mm with integrated spring function the Flush Line allows unrestricted use for object and fire protection doors.

After the mounting of the sub-construction either in or on the door leaf, the door handle with the cover rosette can be quickly secured by way of the simple "Push-Click"-function and the tightening of a grub screw.

For model overview view page 130

Window handles

The HAFI window handle is pivot-mounted on a sub-construction with a ball latch and without a visible grub screw.

The "Push-Push"-function enables a tool-free mounting and dismantling of the cover thanks to the simple meshing of the rosette with the sub-construction.

The flush-fitting ensures that the relevant window handle design is brought to the fore.

For model overview view page 193

Lifting sliding door handles

For the first time, the patented "Push-Push"-function enables the easy flush mounting of a lifting sliding door handle in aluminium or wooden sliding doors.

For model overview view page 193

Finishes

Thanks to the various surface finishes in polished stainless steel, satin brushed or painted in RAL colours as desired of the window handles and lifting sliding door handles there is the opportunity to fuse the cover with the surface of the door or window element into one single unit.

HAFI Flush Line – Design 201/870

Maintenance-free door handle set with stainless steel sub-construction and spring loaded, pivot-mounted, quick mounting by the "Push-Click"-function, optionally also suitable for flush mounting in the door leaf, with rosettes and escutcheons, invisible fixation

Design-WC-rosettes,
with red/green-indicator,
invisible fixation

- Satin stainless steel
- Polished stainless steel

Window handles

The HAFI window handle is pivot-mounted on a sub-construction with a ball latch and without a visible grub screw.

The “Push-Push”-function enables a tool-free mounting and dismantling of the cover thanks to the simple meshing of the rosette with the sub-construction.

The flush-fitting ensures that the relevant window handle design is brought to the fore.

Lifting sliding door handles

For the first time, the patented “Push-Push”-function enables the easy flush mounting of a lifting sliding door handle in aluminium or wooden sliding doors.

Finishes

Thanks to the various surface finishes in polished stainless steel, satin brushed or painted in RAL colours as desired of the window handles and lifting sliding door handles there is the opportunity to fuse the cover with the surface of the door or window element into one single unit.

HAFI Light Line
Design meets light technology

The mechatronic door handle enables the visualisation of the closing status of the door by means of LED technology. A cabling of the door element is basically not necessary. The power supply can be carried out by a battery module or alternatively by an external power supply.

- HAFI Light Line – Design 248 (red/green)**
- Continuous light in red respectively green
 - Continuous current via door cabling necessary
 - Preferably for new construction

- HAFI Light Line – Design 248 (red/white)**
- Temporary light in red
 - Powered by a battery module (battery lifetime approx. 2 years)
 - Preferably for renovation projects

Frame door handles

HAFI has a complete range of different door handles, door knobs and door pulls for frame doors made of metal, plastic or wood.

Due to the use of increasingly narrower frame profiles, due to the current architectural zeitgeist, we at HAFI would like to point out a few important points.

Certified frame door handles

All HAFI frame door handle sets are tested and certified to user category class 4 and are either spring loaded or spring assisted:

Classification key according to DIN EN 1906

4|7*-|B|1|5|0|B| spring loaded and 1,000,000 cycles

4|7|-|B|1|5|0|A| spring assisted and 200,000 cycles

Risk of injury

As a result of the confined space, there is a risk that when the door is opened and closed, parts of the hand on the handle or knob come into contact with the doorframe. In this context we refer to a minimum distance of 25 mm, which must be maintained between the door furniture and opposing closing edge.

Fixing / Installation

Due to the interference-fit connection of our cup point screws on the HAFI projects solid square spindles, it is always ensured that the user fixes the right side of the spindle with the grub screw. In other systems the user must feed the spindle into the hole part so that the grub screw meets the side provided for it. The self-locking grub screws are securely tightened onto the spindle on both sides of the door. In this way, a permanent connection results between the door handle and the square spindle as well as the inside and outside.

A further advantage of this connection solution is that the axial forces produced when the door handle is pressed are absorbed far more efficiently than with floating spindle connections and are forwarded to the door profile. The frequently found condition of gradually loosening door handles after a short time can therefore be effectively counteracted from the outset.

Angle of rotation

Standard angle of rotation 35°
Maximum rotation angle 55° (on request)

Design-cover-rosettes

HAFI cover-rosettes are visually designed for invisible fixing of the frame door hardware. There is no visually disturbing clip lug or similar, visible on the outside. The double function of the clip and clamped seat of the cover rosette on the oval project substructure guarantees the longest possible life.

Installation aids

All HAFI sub-constructions with oval or angular base rosette for metal construction have two integrated rubber feet which surround the fixing screws. These prevent the frame profile from being scratched during installation. At the same time, during tightening they act as slip resistance against easy turning and as additional locking as protection against subsequent loosening of the door furniture.

Security fittings

Security fittings spring loaded for a horizontal 0°-positioning with 1 million movement cycles, certified according to DIN EN 1906.

- The spring forces were significantly increased, so that sagging door handles are a thing of the past.
- 0°-horizontal stop; this technical detail keeps the door handle exactly horizontal.
- Corrosion resistance class 5 according to DIN EN 1670
- Pivot-mounted, maintenance-free equalizing bushing
- On request, form-fitting male and female connection
- Free play < 1.0 mm
- Free play at rest < 1.0 mm

Requirements for security fittings

Protection classes according to DIN EN 1906 (SK 1 to SK 4) or according to DIN 18257 (ES 0 to ES 3)

- SK 1 (ES 0)**
 - Examination of the shield strength: 7 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 10 kN – maximum deformation ≤ 2 mm
 - Drill resistance: no requirement
 - Chisel test resistance: no requirement
 - Examination of the cylinder protection (ZA) strength: no requirement
- SK 2 (ES 1)**
 - Examination of the shield strength: 10 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 15 kN – maximum deformation ≤ 2 mm
 - Drill resistance: 60 HRC or 30 seconds with 200 N
 - Chisel test resistance: 3 strikes at defined positions
 - Examination of the cylinder protection (ZA) strength: 10 kN
- SK 3 (ES 2)**
 - Examination of the shield strength: 15 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 20 kN – maximum deformation ≤ 2 mm
 - Drill resistance: 60 HRC or 3 minutes with 200 N
 - Chisel test resistance: 6 strikes at defined positions
 - Examination of the cylinder protection (ZA) strength: 15 kN
- SK 4 (ES 3)**
 - Examination of the shield strength: 20 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 30 kN – maximum deformation ≤ 2 mm
 - Drill resistance: 60 HRC or 5 minutes with 300 N
 - Chisel test resistance: 12 strikes at defined positions
 - Examination of the cylinder protection (ZA) strength: 20 kN

Technical information	394
Overview models	396
Window handles – Oval rosettes	398
Window handles – Angular rosettes	406
Lockable sub-constructions	410

Ball latch

With the HAFI ball latch, windows are precisely closed, tilted and opened. In this special technology, HAFI uses wear-resistant steel balls which are embedded in a glass fibre reinforced plastic substructure with compression springs. The steel balls are optionally pressed into a zinc ring or into a special plastic by the compression springs, whereby each time the window is activated, perceptible and audible positioning of the handle occurs. On request, latching is also possible for night ventilation at a 45° handle position.

Spindle length

Due to different profile systems and materials, different length spindle protrusions are often required. HAFI supplies standard window handles with a free spindle length starting at 24 mm. If different spindle lengths be required, please simply provide the necessary details on your order.

Fixing

HAFI supplies window handles without screws. Liko countersunk screws M5 are to be used for fixing.

Design-cover-rosette

HAFI latches the cover-rosette through a depression on the inside of the rosette. There are no visually disturbing clip depressions visible on the outside. Here too, in its familiar way, HAFI fulfils customers' expectations with respect to design and technology.

HAFI has dispensed with the grub screw in the neck of the handle, as is usual with the market companions, to improve the appearance – less is more.

Lockable window handles – lock integrated into the handle

The lockable window handle Design 203 is available in several finishes.

Lockable window handles – lock integrated into the sub-construction

Certified according to DIN EN 1627 RC 1–6 (burglary resistant)

The positioning of the locking cylinder in the solid cast sub-construction instead of into the handle offers security in the closed state and therefore offers little opportunities for burglars.

The sub-constructions can be variably mounted with the locking cylinder upwards or downwards. The locking of a closed or tilted window is operated easily by simply pushing the locking cylinder.

The design possibilities are various, as our lockable sub-constructions can be combined with all models of the HAFI Public Line. They fulfil the requirements of the European standard DIN EN 1627 and can therefore be marketed in all the countries of the EU. When combined with a suitable window element the requirements of all resistance classes RC 1–6 are fulfilled.

Tilt-before-turn – special feature for more security

The lockable sub-constructions with the special function "Tilt-before-turn" allows tilting of windows, however, prevents unauthorized opening.

They are available in oval or angular shape and fit all models of the HAFI Public Line.

Window handle according to DIN EN 13126-3 with 90° or 45° positioning, sleeves-Ø 10 mm, fixing distance 43 mm, spindle 7 mm (from 24 mm extending)

Lockable (with separate sub-construction)
Burglary resistant according to DIN EN 1627 RC 1–6

Tilt-before-turn (with sep. sub-construction)

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 228/431

Window handle according to DIN EN 13126-3 with 90° or 45° positioning, sleeves-Ø 10 mm, fixing distance 43 mm, spindle 7 mm (from 24 mm extending)

Lockable (with separate sub-construction)
Burglary resistant according to DIN EN 1627 RC 1–6

Tilt-before-turn (with sep. sub-construction)

- Satin stainless steel (solid)
- Polished stainless steel (solid)

HAFI Public Line – Design 405

Cover rosette with pivotable oval plate for vertical usage (drive handle to open the window sold separately)

- Satin stainless steel

HAFI Public Line – Design 245/431

Window handle according to DIN EN 13126-3 with 90° or 45° positioning, sleeves-Ø 10 mm, fixing distance 43 mm, spindle 7 mm (from 24 mm extending)

Lockable (with separate sub-construction)
Burglary resistant according to DIN EN 1627 RC 1–6

Tilt-before-turn (with sep. sub-construction)

- Satin stainless steel (solid)
- Polished stainless steel (solid)

HAFI Public Line – Design 440

Lockable sub-construction, oval form, fitting all models of the Public Line

Can be mounted with the cylinder towards the top or the bottom

Burglary resistant according to DIN EN 1627 RC 1–6

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 442

Lockable sub-construction with the special function "Tilt-before-turn", oval form, fitting all models of the Public Line

With the cylinder on top on request

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 441

Lockable sub-construction, angular form, fitting all models of the Public Line

Can be mounted with the cylinder towards the top or the bottom

Burglary resistant according to DIN EN 1627 RC 1–6

- Satin stainless steel
- Polished stainless steel

HAFI Public Line – Design 443

Lockable sub-construction with the special function "Tilt-before-turn", angular form, fitting all models of the Public Line

With the cylinder on top on request

- Satin stainless steel
- Polished stainless steel

DIN EN 1125

For emergency exits at which panic situations are likely to occur, panic hardware combinations (lock, lockplate and grab bars) must be used according to the standard.

This applies wherever use by the public with lack of knowledge of the local spatial circumstances is likely.

In case of a panic, people move towards the emergency exits and these masses of people press against the doors. In this situation, the emergency exits with the appropriate panic hardware must open immediately outwards by pressing on the panic bar.

According to the standard EN 1125, panic hardware combinations must be appropriately tested and certified as a functional unit.

Unfortunately, the notes on use of the construction, like EN 179 and EN 1125, hardly deal with the question regarding from when a door is deemed to be a panic door and therefore, from when EN 1125 must be applied. It is our firm conviction that the final decision regarding where panic bar hardware is to be used should lie with the architect/designer – in consultation with the responsible construction authority, of course.

HAFI Panic locking technology

The panic locking technology from HAFI ensures that people can leave a danger zone in a panic situation at any time: simple pressing on a horizontal operating element or on a panic door handle is enough to open the door – regardless of whether the lock was locked beforehand or not.

HAFI's locking technology, certified according to DIN EN 1125, even opens when a crowd is pressing against the door during a panic situation. Even the operating force of a child is sufficient to open the door and thus allowing to escape from fire or any life-threatening emergency situation.

HAFI's panic locking technology fulfills the European standards EN 1125 (Panic exit devices with horizontal bar) and EN 179 (Emergency exit devices by a lever handle or push pad).

Active leaf

To determine the bar length (S):

Design 740
 $S = T - (2 \times D) - 161 \text{ mm}$
 max. bar length 1,339 mm

Design 750
 $S = T - (2 \times D) - 113 \text{ mm}$
 max. bar length 1,137 mm

Order details:

- Bar length (S)
- Door width (T)
- Door thickness
- Backset (D)
- Dimension X1
- Dimension X2
- Material/finish

Inactive leaf

Active leaf with inactive leaf

HAFI Public Line – Pushbar Design 740

This design was specially developed for frame doors. Tested according to EN 1125 and EN 1634 (usable according to EN 1125 only with tested lock and door furniture).

Intended for mounting on single-leaf and two-leaf smoke protection and fire protection doors. Particularly suitable for electronic locking cylinders and short PZ-distances.

Large, sturdy handle bar (vandal-proof). DIN left and DIN right handed usage (optionally). Gearbox unit from zinc plated steel.

HAFI Public Line is very suitable for use with the Pushbar 740. All object handle sets according to DIN EN 1906 and DIN 18273 (for fire and smoke protection doors) as well as all fixed knobs according to DIN 18273 are combinable with the Pushbar 740.

HAFI Public Line – Pushbar Design 750

For wooden and steel plate doors, tested according to EN 1125 and EN 1634. Intended for mounting on single-leaf and two-leaf smoke protection and fire protection doors. Sturdy pushbar with oval handle bar 40 x 18 mm, length 1,137 mm. Form-fit connection between the bar and the lever arm through expanding nylon wedges, DIN left and DIN right handed usage up to a width of 1,250 mm (measured from pivot-axis of the spindle-follower).

HAFI Public Line is very suitable for use with the Pushbar 750. All object handle sets according to DIN EN 1906 and DIN 18273 (for fire and smoke protection doors) as well as all fixed knobs according to DIN 18273 are combinable with the Pushbar 750.

HAFI Touchbar Design 760

The only escape route system according to EN 1125 with integrated communicating display and extensive possibilities for integration into the building management system.

Consequently focused on the principle of panic or one handed operation.

Annual maintenance by qualified personnel is not required.

Pioneering through design of the electronics on the requirements of prEN 13637 – electrically controlled exit systems for use on escape routes.

- corrosion-resistant stainless steel
- high-quality processing
- with pre-, main- and door-open alarm
- the intelligent display indicates various operating states of the door; the display is an inhibitory threshold, as well as a supplementary escape indicator and alarm light
- the electronics allow a straightforward choice between battery or cable operation; in battery operation the Touchbar 760 automatically switches to an energy saving mode
- forwarding of the signals “permanent release” and “main alarm” either wired or wireless
- length of the push rod 790–1,290 mm; other lengths are available on request
- right/left handed
- maximum follower rotation angle 40° (45° if necessary)
- audible alarm of 95 dBA

Pre-alarm

When the Touchbar 760 is only slightly depressed, a pulsating red display is visible as well as an acoustic signal (95 dBA/1 m). Both are terminated when the Touchbar is released.

Main alarm upon emergency opening or unauthorized use

When the Touchbar 760 is completely depressed, the door is emergency opened. At the same time, the display is lit green and an acoustic signal (95 dBA/1 m) sounds continuously.

Acknowledgment

By operating the integrated key switch, the triggered alarm is disabled.

Individual release

Authorized persons pass through the door implementing the integrated key switch without raising the alarm. Alternatively, passage through use of the door lock is possible. In order to prevent that the door is accidentally left opened, an “open door alarm” will sound after 10 seconds and terminates when the door is closed again.

Permanent release

With the key switch the Touchbar 760 can be placed on permanent release, so that no alarm is triggered when the door is used.

HAFI Public Line – Touchbar Design 763

Mechatronic design with integrated door monitoring with alarm function (alarm sound) with key switch

This model can be operated either by a 9 V battery including integrated battery monitoring or by a power supply with connection cable. The battery monitoring is checking the voltage every 10 hours. If the voltage drops below 7 V, a short acoustic signal sounds every 60 seconds.

For profile frame and full leaf doors, metal or wood, tested with panic lock according to EN 1125 and EN 1634. Intended for mounting on single-leaf and two-leaf smoke protection and fire protection doors.

Flush resting on the door with low building height (83 mm). DIN left and DIN right handed usage up to a leaf width of 1,600 mm. Very sturdy version (vandal-proof) made of stainless steel.

The Touchbar is delivered in three different lengths which can be shortened individually and adapted perfectly to every door.

- length 970 mm (can be shortened by 180 mm)
- length 1,130 mm (can be shortened by 160 mm)
- length 1,290 mm (can be shortened by 160 mm)

■ Satin stainless steel

HAFI Public Line – Touchbar Design 762

Design with potential-free contact with alarm function (alarm sound) without key switch

This model is a push rod with an additional potential-free contact for evaluating the positioning of the door. There is a signal when the Touchbar is pressed, which is terminated as soon as the door is closed again.

For profile frame and full leaf doors, metal or wood, tested with panic lock according to EN 1125 and EN 1634. Intended for mounting on single-leaf and two-leaf smoke protection and fire protection doors.

Flush resting on the door with low building height (83 mm). DIN left and DIN right handed usage up to a leaf width of 1,600 mm. Very sturdy version (vandal-proof) made of stainless steel.

The Touchbar is delivered in three different lengths which can be shortened individually and adapted perfectly to every door.

- length 970 mm (can be shortened by 180 mm)
- length 1,130 mm (can be shortened by 160 mm)
- length 1,290 mm (can be shortened by 160 mm)

■ Satin stainless steel

HAFI Public Line – Touchbar Design 761

Mechatronic design without door monitoring

This model is a push rod without additional contacts.

For profile frame and full leaf doors, metal or wood, tested with panic lock according to EN 1125 and EN 1634. Intended for mounting on single-leaf and two-leaf smoke protection and fire protection doors.

Flush resting on the door with low building height (83 mm). DIN left and DIN right used up to a leaf width of 1,600 mm. Very solid (vandal-proof) made of stainless steel.

The Touchbar is delivered in three different lengths which can be shortened individually and adapted perfectly to every door.

- length 970 mm (can be shortened by 180 mm)
- length 1,130 mm (can be shortened by 160 mm)
- length 1,290 mm (can be shortened by 160 mm)

■ Satin stainless steel

Accessories for the Touchbar

Cutting tools

For the individual cutting of the Touchbar – protection of the bar against deformation of the profile during the cutting operation.

Cover plate

For horizontally screw mounted handle rosettes for locks with PZ 72/RZ 74 and full leaf doors.

Adapter

Adapter for external power supply for the Touchbar 763 (230 V AC/12 V DC/1 A).

Extension lead

For external power supply and alarm forwarding – pre-assembled cable 10 m, 12 x 0.14 LIYY with 12-pin, labeled connector.

HAFI Public Line – Design 289

Knob for prison cell doors for inmate operation, with equalizing bushing, anti-ligature, completely in stainless steel, with dismantling protection

Requirements for security fittings

Protection classes according to DIN EN 1906 (SK 1 to SK 4) or according to DIN 18257 (ES 0 to ES 3)

- SK 1 (ES 0)**
 - Examination of the shield strength: 7 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 10 kN – maximum deformation ≤ 2 mm
 - Drill resistance: no requirement
 - Chisel test resistance: no requirement
 - Examination of the cylinder protection (ZA) strength: no requirement
- SK 2 (ES 1)**
 - Examination of the shield strength: 10 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 15 kN – maximum deformation ≤ 2 mm
 - Drill resistance: 60 HRC or 30 seconds with 200 N
 - Chisel test resistance: 3 strikes at defined positions
 - Examination of the cylinder protection (ZA) strength: 10 kN
- SK 3 (ES 2)**
 - Examination of the shield strength: 15 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 20 kN – maximum deformation ≤ 2 mm
 - Drill resistance: 60 HRC or 3 minutes with 200 N
 - Chisel test resistance: 6 strikes at defined positions
 - Examination of the cylinder protection (ZA) strength: 15 kN
- SK 4 (ES 3)**
 - Examination of the shield strength: 20 kN – allowable deformation ≤ 5 mm
 - Tensile load of fixing: 30 kN – maximum deformation ≤ 2 mm
 - Drill resistance: 60 HRC or 5 minutes with 300 N
 - Chisel test resistance: 12 strikes at defined positions
 - Examination of the cylinder protection (ZA) strength: 20 kN

HAFI glass door set – Design 120

Glass door lock set, PZ latch lock, with stainless steel cover, PZ keyhole or blind, for glass thickness 8–12 mm

Follower 8 mm
 Handle guidance 16 mm
 Backset 49 mm

■ Satin stainless steel

HAFI glass door set – Design 151

Glass door hinge, wing part for two-part hinge, angular form, for glass thickness 8–12 mm, door weight ≤ 60 kg

Fields of application:
 For wooden or steel frames, doors of single pane safety glass (ESG)

Scope of delivery:
 Hinge (wing part, counter-pressure plate), cover for counter-pressure plate, 2 foam rubber spacers

■ Satin stainless steel

HAFI glass door set – Design 152

Glass door hinge, wing part for two-part hinge, round form, for glass thickness 8–12 mm, door weight ≤ 60 kg

Fields of application:
 For wooden or steel frames, doors of single pane safety glass (ESG)

Scope of delivery:
 Hinge (wing part, counter-pressure plate), cover for counter-pressure plate, 2 foam rubber spacers

■ Satin stainless steel

HAFI glass door set – Design 153

Glass door hinge,
wing part for three-part hinge,
for glass thickness 8–12 mm,
door weight ≤ 60 kg

Fields of application:
For wooden or steel frames,
doors of single pane safety glass (ESG)

Scope of delivery:
Hinge (wing part, counter-pressure plate),
cover for counter-pressure plate,
2 foam rubber spacers, 1 pin

A word about our door stops

We would like you to enjoy HAFI products for a very long time. To this end, we ask that before ordering or installing, you check the weight of the door, the impact point and the distance between the bottom edge of the door and the door frame bottom, and its strength.

Based on the determined parameters, the suitable door stop for the respective installation situation can be selected.

We have a large number of different door stops. From a simple door stop for the home to stainless steel extensions, through to stable anchor fixings for the wall or floor.

Please contact us if you have any questions regarding this, we will be pleased to advise you.

- 884S Set 10: for door thickness 81–88 mm

HAFI extension set 8850

Public Line frame door furniture
Design 560/561

Extension set for door handle sets
(handle/handle) on long plate
with screws

Spindle 8 mm

Extension set

- 8850 Set 1: for door thickness 36–43 mm
- 8850 Set 2: for door thickness 41–48 mm
- 8850 Set 3: for door thickness 46–53 mm
- 8850 Set 4: for door thickness 51–58 mm
- 8850 Set 5: for door thickness 56–63 mm
- 8850 Set 6: for door thickness 61–68 mm
- 8850 Set 7: for door thickness 66–73 mm
- 8850 Set 8: for door thickness 71–78 mm
- 8850 Set 9: for door thickness 76–83 mm
- 8850 Set 10: for door thickness 81–88 mm

HAFI extension set 885S

Public Line frame door furniture
Design 560/561

Extension set for door handle sets
(handle/handle) on long plate
with screws

Spindle stepped 8/10 mm

Extension set

- 885S Set 1: for door thickness 36–43 mm
- 885S Set 2: for door thickness 41–48 mm
- 885S Set 3: for door thickness 46–53 mm
- 885S Set 4: for door thickness 51–58 mm
- 885S Set 5: for door thickness 56–63 mm
- 885S Set 6: for door thickness 61–68 mm
- 885S Set 7: for door thickness 66–73 mm
- 885S Set 8: for door thickness 71–78 mm
- 885S Set 9: for door thickness 76–83 mm
- 885S Set 10: for door thickness 81–88 mm

HAFI spindle 8560

Public Line plain door furniture

- Door thickness 30–49 mm: 8 x 110 mm
- Door thickness 30–89 mm: 8 x 130 mm
- Door thickness 50–99 mm: 8 x 150 mm
- Door thickness 70–119 mm: 8 x 170 mm
- Door thickness 90–159 mm: 8 x 220 mm

The length of the spindle depends on the
chosen handle model.

HAFI extension set 8753

Public Line plain door furniture
(standard door thickness 36–49 mm)

Extension set for handle-knob sets
(knob/handle)
with screws

Spindle 8 mm

Extension set

- 8753 Set 1: for door thickness 46–59 mm
- 8753 Set 2: for door thickness 56–69 mm
- 8753 Set 3: for door thickness 66–79 mm

HAFI extension set 8763

Public Line plain door furniture
(standard door thickness 36–49 mm)

Extension set for handle-knob sets
(knob/handle)
with screws

Spindle 8 mm

Extension set

- 8763 Set 1: for door thickness 46–59 mm
- 8763 Set 2: for door thickness 56–69 mm
- 8763 Set 3: for door thickness 66–79 mm

HAFI extension set 8874

Security fittings frame doors
Design 550/551
(standard door thickness 40 mm)

Protection class SK4

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8874 Set 1: for door thickness 37–42 mm
8874 Set 2: for door thickness 42–47 mm
8874 Set 3: for door thickness 47–52 mm
8874 Set 4: for door thickness 52–57 mm
8874 Set 5: for door thickness 57–62 mm
8874 Set 6: for door thickness 62–67 mm
8874 Set 7: for door thickness 67–72 mm

HAFI extension set 8864

Security fittings frame doors
Design 554/555
(standard door thickness 40 mm)

Protection class SK4

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8864 Set 1: for door thickness 37–42 mm
8864 Set 2: for door thickness 42–47 mm
8864 Set 3: for door thickness 47–52 mm
8864 Set 4: for door thickness 52–57 mm
8864 Set 5: for door thickness 57–62 mm
8864 Set 6: for door thickness 62–67 mm
8864 Set 7: for door thickness 67–72 mm

HAFI extension set 8873

Security fittings frame doors
Design 550/551
(standard door thickness 40 mm)

Protection class SK3

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8873 Set 1: for door thickness 37–42 mm
8873 Set 2: for door thickness 42–47 mm
8873 Set 3: for door thickness 47–52 mm
8873 Set 4: for door thickness 52–57 mm
8873 Set 5: for door thickness 57–62 mm
8873 Set 6: for door thickness 62–67 mm
8873 Set 7: for door thickness 67–72 mm

HAFI extension set 8863

Security fittings frame doors
Design 554/555
(standard door thickness 40 mm)

Protection class SK3

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8863 Set 1: for door thickness 37–42 mm
8863 Set 2: for door thickness 42–47 mm
8863 Set 3: for door thickness 47–52 mm
8863 Set 4: for door thickness 52–57 mm
8863 Set 5: for door thickness 57–62 mm
8863 Set 6: for door thickness 62–67 mm
8863 Set 7: for door thickness 67–72 mm

HAFI extension set 8893

Security fittings plain doors
Design 510/511
(standard door thickness 40 mm)

Protection classes SK4 and SK3

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8893 Set 1: for door thickness 37–42 mm
8893 Set 2: for door thickness 42–47 mm
8893 Set 3: for door thickness 47–52 mm
8893 Set 4: for door thickness 52–57 mm
8893 Set 5: for door thickness 57–62 mm
8893 Set 6: for door thickness 62–67 mm
8893 Set 7: for door thickness 67–72 mm

HAFI extension set 8883

Security fittings plain doors
Design 514/515
(standard door thickness 40 mm)

Protection classes SK4 and SK3

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8883 Set 1: for door thickness 37–42 mm
8883 Set 2: for door thickness 42–47 mm
8883 Set 3: for door thickness 47–52 mm
8883 Set 4: for door thickness 52–57 mm
8883 Set 5: for door thickness 57–62 mm
8883 Set 6: for door thickness 62–67 mm
8883 Set 7: for door thickness 67–72 mm

HAFI extension set 8891

Security fittings plain doors
Design 520/521 and Design 522/523
(standard door thickness 40 mm)

Protection class SK3

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8891 Set 1: for door thickness 37–42 mm
8891 Set 2: for door thickness 42–47 mm
8891 Set 3: for door thickness 47–52 mm
8891 Set 4: for door thickness 52–57 mm
8891 Set 5: for door thickness 57–62 mm
8891 Set 6: for door thickness 62–67 mm
8891 Set 7: for door thickness 67–72 mm

HAFI extension set 8881

Security fittings plain doors
Design 524/525 and Design 526/527
(standard door thickness 40 mm)

Protection class SK3

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8881 Set 1: for door thickness 37–42 mm
8881 Set 2: for door thickness 42–47 mm
8881 Set 3: for door thickness 47–52 mm
8881 Set 4: for door thickness 52–57 mm
8881 Set 5: for door thickness 57–62 mm
8881 Set 6: for door thickness 62–67 mm
8881 Set 7: for door thickness 67–72 mm

HAFI extension set 8892

Security fittings plain doors
Design 540/541
(standard door thickness 40 mm)

Protection classes SK3 and SK2

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8892 Set 1: for door thickness 40–45 mm
8892 Set 2: for door thickness 45–50 mm
8892 Set 3: for door thickness 50–55 mm
8892 Set 4: for door thickness 55–60 mm
8892 Set 5: for door thickness 60–65 mm
8892 Set 6: for door thickness 65–70 mm
8892 Set 7: for door thickness 70–75 mm

HAFI extension set 8882

Security fittings plain doors
Design 544/545
(standard door thickness 40 mm)

Protection classes SK3 and SK2

Extension set for handle-knob sets
(knob/handle) with screws

Extension set
8882 Set 1: for door thickness 40–45 mm
8882 Set 2: for door thickness 45–50 mm
8882 Set 3: for door thickness 50–55 mm
8882 Set 4: for door thickness 55–60 mm
8882 Set 5: for door thickness 60–65 mm
8882 Set 6: for door thickness 65–70 mm
8882 Set 7: for door thickness 70–75 mm

HAFI extension set 875W

Public Line plain doors furniture

ÖNORM
(standard door thickness 36 – 49 mm)

Extension set for handle-knob sets
(knob/handle) with screws

Spindle stepped 8/8.5 mm

Extension set
875W Set 1: for door thickness 46 – 59 mm
875W Set 2: for door thickness 56 – 69 mm
875W Set 3: for door thickness 66 – 79 mm

HAFI extension set 876W

Public Line plain doors furniture

ÖNORM
(standard door thickness 36 – 49 mm)

Extension set for handle-knob sets
(knob/handle) with screws

Spindle stepped 8/8.5/8 mm

Extension set
876W Set 1: for door thickness 46 – 59 mm
876W Set 2: for door thickness 56 – 69 mm

HAFI spindle 8790

Anti-panic spindle

9 x 55/55 mm
9 x 65/65 mm

The anti-panic spindle is individually cut
to length on the outside.

Please specify when ordering:
– door thickness
– measurements Xa and Xi
– spindle projection Va and Vi
(plate or escutcheon thickness + 15 mm)

Labelling on the package and on the product according to DIN EN 1906

On the basis of the product labelling, owners and architects on site can check for conformity with the standards in accordance with the required certification and tender guidelines.

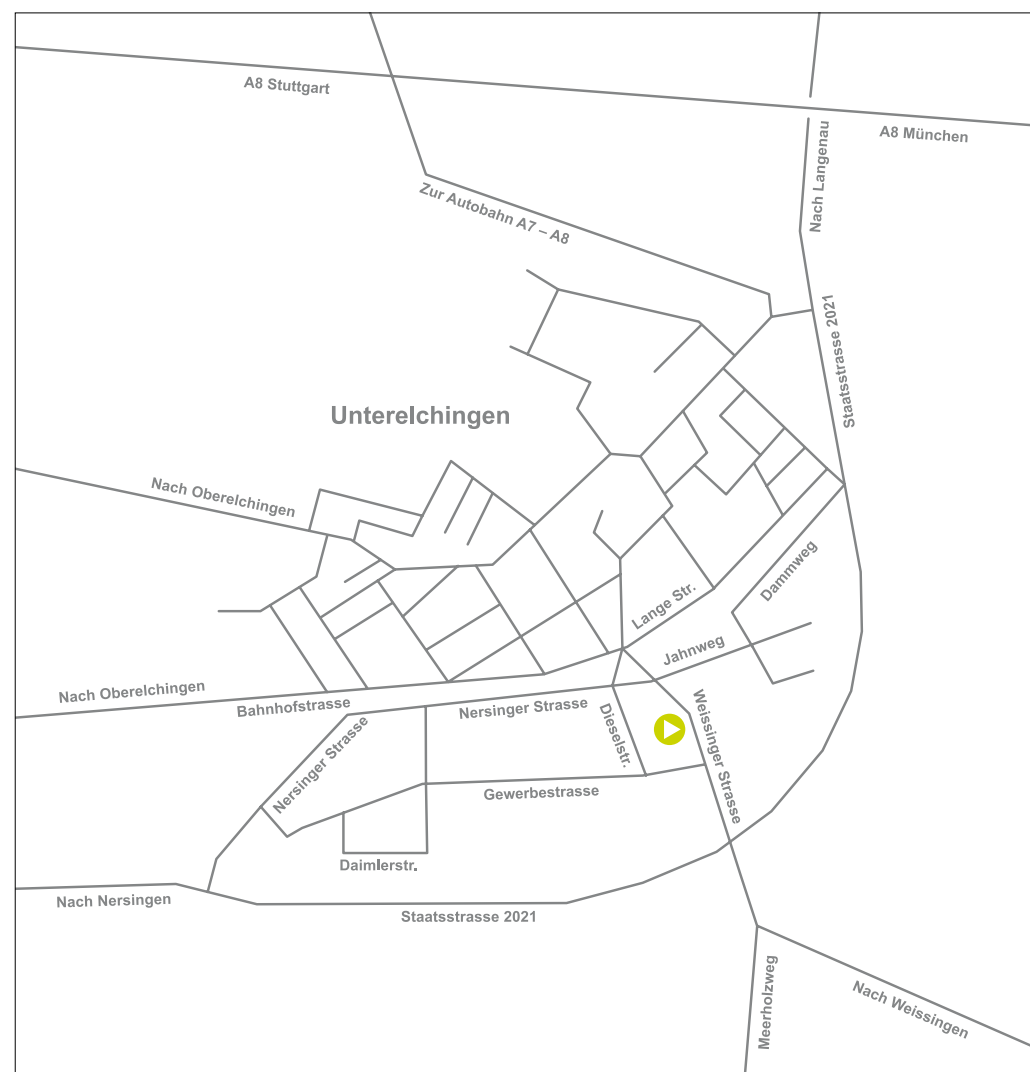

A certified door handle set is identifiable at any time by way of the register number on the packaging and on the product (29V33).

Advantage of the cup point screw

Due to the interference-fit connection of our cup point screws on the HAFI projects solid square spindles, it is always ensured that the user fixes the right side of the spindle with the grub screw. In other systems the user must feed the spindle into the hole part so that the grub screw meets the side provided for it. The self-locking grub screws are securely tightened onto the spindle on both sides of the door. In this way, a permanent connection results between the door handle and square spindle and the inside and outside.

A further advantage of this connection solution is that the axial forces produced when the door handle is pressed are absorbed far more efficiently than with floating spindle connections and are forwarded to the door profile. The frequently found condition of gradually loosening door handles after a short time can therefore be effectively counteracted from the outset.
