About HAFI

HAFI Beschläge GmbH – giving the best to our customers around the world since 1978.

Since 1978

Hans Fink founded HAFI in 1978, today the company is managed by René Fink and Jochen Maier. We develop and manufacture fittings for customers around the world from our location in Elchingen, Germany. Our employees share our passion and give their best to our customers every day. In 2018, HAFI manufactured 450,000 fitting pieces for doors and windows.

Fitting products – we shape fine steel

HAFI produces a number of fitting products out of stainless steel. The shape and surface finish can be produced individually.

Whether matte-brushed or polished, stainless steel surfaces are durable, elegant and timeless. Thanks to the exceptionally smooth and non-porous surface, stainless steel handles are very dirt-resistant and long-lasting.

Customised to meet the customer's wishes

We turn our customer's ideas into reality, and accompany you from concept creation and prototype construction to multi-trade delivery of the item.

With PVD-coating or the SoftTouch surface, we can produce fittings in any colour with various surface finishes.

Multi-trade

We have the right solution for any building type and any requirement. For door handles for residential building to electronic locking systems in public buildings.

Easy installation

Our fittings prove that design and technology can go hand in hand. One example is our latest development – Flush Line technology for windows, doors and lifting-sliding doors.

Mix it!

Create your door handle.

1. Select your handle rosette.

Round 1-piece

Round 2-piece

Square 1-piece

Square 2-piece

2. Select the keyhole rosette.

Profile cylinder round

Round cylinder round

PVD – create highlights with metallic colours!

Rosé-gold, bronze, brass or black – create highlights with PVD-coated fittings. In addition to brilliant colour intensity, the PVD-coating also shines with excellent resistance to scratches and wear.

The PVD surfaces are available in a matte and polished version.

SoftTouch

It's time for colour.

HAFI SoftTouch

With the SoftTouch surfaces – **Made in Germany** – we not only add colour to the daily stainless steel experience, we also add a touch & feel element. The SoftTouch surface, with its irresistible matte finish, seems to invite you touch it. It feels good in your hand with its exceptionally soft and warm surface, providing a definite feel-good factor.

In addition to the wow-effect that comes with touching it, the SoftTouch finish conveys very high value and can be adapted to all interior designs with custom colour selection.

Standard colours

The HAFI SoftTouch surface is available in five standard colours that you can find on the back of the "Touch me" card.

Do you have a custom colour in mind?

Be sure to ask us about it!

HAFI standard colours:

If you can't find a SoftTouch sample card here, simply contact us at vertrieb@hafi.de with the key words "SoftTouch Sample".

Safety first!

HAFI protective fittings – Tested. Certified. Safe.

Break-in security

Protective fittings should effectively hinder forcible turning of the profile cylinder and a mechanical attack on the lock. HAFI protective fittings are recommended by the Bavarian Criminal Police Bureau, and are documented in the list of “protective fittings inspected and certified to DIN 18257”.

Protective fittings certified to DIN 18257 are classified in the resistance classes ES 0 to ES 3, and/or certified to DIN EN 1906 (SK1 to SK4). Protective fittings from resistance class ES 1 and up are recommended.

Fire protection

Fire protection fittings certified to DIN 18273 are components of the state building codes and/or Model Administrative Provisions - Technical Building Rules (MVTB) and require a mark of conformity (ÜZ) as a usage certificate. In accordance with this legal guideline, HAFI fire protection fittings are quality-monitored and have a mark of conformity issued by the material testing agency NRW.

Emergency exit

Panic fitting combinations certified to Norm DIN EN 179 are utilised for emergency exits, where panic situations can be reckoned with.

HAFI offers you a wide, extensive and multi-trade assortment with corresponding testing and certifications for the combination of approved fitting packages certified to Norm DIN EN 179.

Flush Line

HAFI Flush Line – Flush-mounted aesthetics and reduced rosette design.

We have adopted the design trend of reducing visible structures and have developed a new product line for door, window and lifting-sliding door handles.

The result is a combination of aesthetics, flush-mounted elements and winning easy installation.

The various surface variants in stainless steel that is polished, matte-brushed, or lacquered according to RAL request, enable the coverings of both window handles as well as lifting-sliding door handles to melt into one unit with the surface of the door element.

Lifting-sliding door handles

Door handles

With reduced design height of the rosette of just 4 mm with integrated spring function, the Flush Line technology enables unlimited usage for property or fire protection doors.

After the base structure has been attached in or on the door panel, the door handle can be mounted in seconds with the cover rosette with a simple “push-click” function and by tightening a grub screw.

Window handles

The HAFI window handle is swivel-mounted on a base structure with ball catch with invisible grub screws.

The patented “push-push” function enables installation and disassembly of the cover without tools thanks to the easy latching of the rosette onto the base structure.

With flush-mounting the focus is shifted to the respective window handle design.

Lifting-sliding door handles

For the first time, the patented “push-push” function allows a lifting-sliding door to be flush-mounted in aluminium or wood sliding doors in an easy-to-install way. Lacquered in the same colour, the cover and the frame melt into one.

Minimalism

in perfection.

Clear and streamlined – in line with minimalism – introducing HAFI Flush Line technology. Lacquered in the same colour, the cover and the frame melt into one.

Change it!

With our “Push & Click” technology you can switch out door handles faster than ever before!

This way any door handle can be switched at any time to match the interior design – in seconds. Once the base structure of the Flush Line has been mounted, handles can be attached as desired by pushing and clicking with “Push & Click”.

The only tool that is needed is an Allen key, in order to tighten the clipped-on handle.

1. Choose the shape! Round or square?
2. Select your door handle model. Elegant, modern or timeless?
3. Select your surface. SoftTouch, PVD or classic stainless steel?
4. Depending on the selected surface, you can select your customised colour choice!
5. Once our Flush Line base structure is mounted you can simply clip your new door handle on, tighten the grub screw & you're done!

Push & Click!
