## Flush Line - New flush aesthetics for window and door fittings

---

Less is often more: HAFI has taken up the design trend of reducing visible structures and developed a new product line for door and developed a new product line for door, window and lift-and-slide handles. The result is a combination of aesthetics, flushness and convincing ease of installation. Thanks to the design option of flush-mounted design roses in the same color as the door or window element, the cover merges with the surface to form a single design unit. This brings the handle design more into focus for the observer.

At BAU 2017 in Munich, HAFI is presenting this newly developed and patented Flush Line.

The Flush Line offers a selection of round, oval and angular design rosettes, which can be combined with all lever handle designs from the extensive, cross-trade HAFI product portfolio. Thus, for the first time, it is possible for architects and planners to realize all trades with the same design approach without restriction. The rosettes are available in the surfaces polished stainless steel, matt brushed, and RAL painted on request.

### Flush Line Door Fitting

The reduction of the installation height to just 4mm, without dispensing with an integrated hold-up spring mechanism, clearly sets the Flush Line apart from all competitor products. This combination is available for the first time in the contract sector.

After fastening the substructures in or on the door leaf, the door handle set can be simple „push-click“ function and the tightening of a grub screw in no time at all.

With the appropriate door thickness, the Flush Line can also be integrated flush into the door leaf.

### Flush Line window handle

The window handle is mounted on a substructure with ball catches without visible grub screw. The „push-click“ function allows the cover to be installed and removed without tools by simply snapping the rosette onto the substructure.

The flush-mounting of the cover brings the respective window handle design more to the fore.

### Flush Line lift and slide door handle

HAFI also transfers the consistent design approach of the Flush Line to the area of lift-slide door elements. The patented „Push-Push“ function makes it possible for the first time to recess a lift-slide door handle flush with the surface of aluminum or wooden sliding doors for easy installation.

Thanks to the various surface finishes in polished stainless steel, matt brushed or according to RAL wishes, the lift-and-slide door handle also offers the possibility of merging the cover with the surface of the door element to form a single unit.

The new lever handle models HAFI Design 218 XXL and HAFI Design 245 XXL as well as the new angular rosette with a Design edge and the angular handle shell expand the HAFI product range and make it one of the most comprehensive ranges in the hardware sector for high-quality lift-slide door elements.

## HAFI Beschläge GmbH

HAFI Beschläge GmbH, founded in 1978, is a medium-sized company that manufactures a wide range of high-quality hardware products from stainless steel. HAFI offers the right solution for every type of building and every requirement. From lever handles for residential buildings to electronic locking systems for public buildings. Shape and surface finish can be realized individually.
